### **eZfireplan named one of top three software applications in Canada**

In a four month, nation-wide competition, eZfireplan, a software application developed by Waterloo, Ontario-based First Sentinel Technologies Inc., was named one of the top three in Canada in the TEAM DEVELOPMENT software category. The contest, run by Microsoft Canada, drew submissions from private business, government, and universities across the country. Submissions were ranked on technical items from efficient code development and use of Microsoft “Best Practices” techniques, to social factors such as value provided to the community at large. Nation wide e-voting was held followed by a final determination by a select committee made up of members of MSDN, the Microsoft Developers Network.

The top three winners in the TEAM software category were applications that provided solutions to health management in a hospital setting, an aircraft refuelling safety software and, of course, our fire safety software, eZfireplan.

Everyone at First Sentinel Technologies Inc. deserves applause for the years devoted to developing this outstanding software: from the initial market research and product definition, through data base and architecture development, to the long hours (years) of coding.
