OCTOBER 2008

First Sentinel Technologies Sponsors Vendor Outreach Forum

First Sentinel Technologies helped sponsor and participated in a two day **VOF** organized by CATA (Canadian Alliance of Technology Associations) and supported by CPRC (Canadian Police Research Centre) at the Toronto Convention Centre, October 8 – 9. The VOF provided a unique opportunity for both the public safety community and industry to jointly educate each other in an open, collaborative environment.

First Sentinel was one of a small number of software suppliers involved in this event which attracted over sixty (60) first responder organizations from across Canada. The forum format included speaker presentations, panel discussions and meetings in a town hall format. There were also executive boardrooms where select vendors were able to meet with a panel of 30 first responders and IT decision makers to present their unique solutions.

A major and salient issue which came out of this forum was the problem of interoperability, that is, the difficulty of first response organizations to share and collaborate on key information. First Sentinel's products were the only software solutions at the VOF which provide complete interoperability to all first responders.
